

"I changed a lot of things... You will see a new folder titled 'PleaseTakeThisIntoConsideration_PlusBabyTax' has been added to the repository. Please view the contents of the folder. Started a new skeleton code in the macro-enabled spreadsheet titled 'Test_Script_Multiple_year_stock-data" It is not a functional code yet, but after viewing the contents of the "Consideration" folder the correlation will make sense. I am still struggling with syntax and structure, but the work that is in these two files I think demonstrates that I am finally beginning to get the foundations of coding. This is an immense improvement from yesterday. I've been having a pretty crummy mental health week and my daughter has been extra demanding. She's starting to miss mumma with how much time I have been devoting to the class. It's hard on both of us. Being a first time mom is tough. I'm not trying to make excuses and I understand if this doesn't meet criteria for a passing grade. I would like to be graded and given feedback on this assignment until I can complete it to a passing standard. I plan to do this in tandem with my other homework assignment if you allow it. I also fooled around in some cells in the spreadsheet to figure out the necessary value references to do the calculations. I've really been struggling with breaking coding down into the baby step-by-step directions and how to flesh them out and nest them, but I think I am on a good track now. So, on that note, I will end this by saying that I am happy with my progress even if it's not perfect."
